Abstract

One of the most interesting and at the same time most controversial economic questions is how much state should be in the economy? How actively should the public authority intervene in the functioning of the market. There are many theories and views on this subject. However, in a discussion of this kind, a clear distinction should be made between interference of a micro- and macro-economic nature. The present study refers to the latter, and primarily taking place in the fiscal sphere.

Keywords: fiscal integration, redistribution rate, crisis conditions, Poland
